Built-In Collection

Welcome to the world of Beko Built-In appliances where functionality, elegance and style blend in full harmony.

A wide product range that lets you create a kitchen where personal preferences and technology fit perfectly together.

A range of appliances that provide intelligent solutions for all your cooking, washing and cooling needs.

A collection designed to improve your everyday life.

The kitchen has become a focal point of our homes. It is a place where families gather and friends meet; a place where we feel comfortable and enjoy each other's company; a place where we spend time and effort to create a pleasant environment for ourselves and our loved ones. The kitchen of our dreams is an expression of our choices. We all want the freedom to choose. With its four distinctive lines, this is exactly what the Beko Built-In Collection offers.

Sleek & trendy

With shining glass surfaces at its core, the Vitreous Line reflects the beauty of your kitchen.

Cool & stylish

The Prime Line is characterized by its stainless steel finish and superior product features.

Modern Classics

The Classic Line combines stainless steel surfaces and core product features in a modern and attractive design.

Compact & functional

The Compact Line offers maximum functionality in minimal space.

Internationally recognized design excellence

The Beko oven model OIM 25500 X received the 2009 IF Design Award for its excellence in design and functionality.

One of the most reputable design awards in Europe, the IF Design Award is granted by IF International Forum Design GmbH, a German organisation that evaluates hundreds of candidates every year in the categories of design quality, innovation, choice of material, workmanship, ergonomics, safety, and functionality, granting an award to those that stand out in each class.

The easy-to-use control panel is equipped with push-in pop-out knobs and an electronic programmer with animated display.

Award-winning ovens for your home

The electronic programmer with animated display enables the user to navigate with symbols that are easy to read - even for the elderly. The display shows the selected cooking function, as well as the recommended tray level for best cooking results.

Cooking duration can be programmed for an immediate or delayed start. Cooking temperature can be set between 40 °C and 280 °C, at intervals as precise as 5 °C.

Super Energy Saver
20% more energy saving than A class

A-20%

All Beko ovens feature A-class energy efficiency, delivering excellent cooking performance with minimum energy consumption. During fan heating, the multi-function Beko oven consumes 20% less energy than the standards outlined by "A" energy efficiency class.

Fingerprint-free Stainless Steel

The Prime Line oven control panels are fingerprint-free stainless steel. Thanks to a special coating on the stainless steel surface, all fingerprints are avoided, and the appliance always maintains a spotless, clean, and shiny surface.

BEKO_BI_FINAL_03.indd 16-17 11/10/09 4:07 PM

King-size Interior

When it comes to capacity, bigger is definitely better. Despite its standard dimensions, the 65-liter* Beko oven has among the most spacious interiors in its class. The king-size interior provides enough room to roast a big turkey, or prepare a big feast for family and friends. It's convenient for large families, or anybody who wants to get the most out of a standard built-in oven.

* for multifunction ovens

Family Tray

Thanks to the king-size interior, Beko oven trays are large enough to cook up to 25 % more food in one go - an intelligent feature that makes it easier to cook large meals. In addition to its size, the 55 mm-deep tray is ideally suited for roasting or baking.

Luminous Interior

Besides the back-wall lamp, selected oven models are equipped with an additional lamp placed on the right wall for improved illumination and added convenience.

PractiClean

Constructed with a full glass panel, the interior of the door is free of bolts, making it easy to clean with a single wipe.

Every Beko Built-In oven is equipped with this easy-to-clean full glass door. For more extensive cleaning, the inner glass can be removed with an apparatus*.

* on selected models

Made of a single piece, the oven cavity is free of bolts, welding lines, intersection points, or any other dirt traps that can turn cleaning the interiors into a difficult chore. You can run your hand around each and every corner of the oven cavity without encountering a single snag.

When cleaning the interior, the side racks that are tightly fixed to the oven cavity can be easily detached without need of a tool.

The catalytic panel mounted on the back wall of the oven cavity absorbs grease and reduces odors during cooking, making it easier to clean the oven without the need for heavy-duty cleansers.

Pyrolytic Self-Cleaning

Removing greasy stains that accumulate in the oven over time can be a burden. Beko pyrolytic ovens save you the trouble of scrubbing those hard-to-reach surfaces. The 120-minute pyrolytic self-cleaning cycle burns stubborn stains to fine ash as your oven heats itself to 500 °C. The ash can then be simply wiped away with a piece of cloth, without need of any detergents or chemicals. For less dirty ovens, you can use the shorter 90-minute eco-pyrolytic cycle which saves 25% on energy consumption.

BEKO_BI_FINAL_03.indd 18-19 11/10/09 4:08 PM

State-of-the-art technology for healthy and wholesome meals

Strong Oven Door

The door hinges have a sleek yet strong and durable design. Due to the solidity of the hinges, the door can carry a load as heavy as 22.5 kg, which is over 20 % more than standard oven doors. That means you can place your fully loaded trays on the door without any worry.

Side Opening

The new side-hinge ovens ensure easy access to the interior along with optimum user convenience.

Door Lock & Key Lock

Beko ovens with electronic programmers are equipped with a door and key locking option to prevent the little ones from playing with the settings or opening the door while the oven is in operation. Classic and Comfort Line ovens can be equipped with a mechanical child-lock feature that can be installed as an additional accessory.

Cool Door

Thanks to four layers of glass on the oven door, the surface temperature never exceeds 70 °C even during the pyrolytic cycle, when the inner temperature of the oven can reach up to 500 °C. During standard cooking, the door's temperature remains as low as 50 °C.

On multifunction ovens with three layers of glass, the surface temperature of the door never exceeds 70 °C during cooking, thus preventing any accidental burns.

Pull-out Shelf System

The extending arms of the telescopic pull-out shelf system enables easy and safe access to the cooking tray.

Silent operation for a peaceful home environment

Beko ovens operate silently even during fan cooking.

OdorFree Cooking

Built-in ovens continuously circulate air to cool themselves down so that the heat generated does not harm the kitchen cabinets. Depending on the type of food being cooked, this working principle may come with a major drawback: unwanted food odors spreading throughout your kitchen.

Selected Beko ovens are equipped with a special odor-filtering system. Comprised of a heater that actively burns the greasy particles, along with a catalyzer that filters the circulated air during cooking, this filtering system ensures that the kitchen environment remains free of noxious smells and greasy vapours.

Because the pyrolytic cleaning cycle can also generate unwanted odors, Beko pyrolytic ovens are equipped with a catalyzer that filters air during this cycle, thus ridding it of the smell of burned grease and harmful CO gasses.

BEKO_BI_FINAL_03.indd 20-21 11/10/09 4:09 PM

Explore a world of culinary delight with flexible and energy-efficient functions

Conventional Cooking
The top and bottom heating elements operate without the fan. This provides a traditional style of cooking suitable for baking cakes, cookies and delicate pastries.

Fan-Assisted Cooking
This function provides for the even distribution of heat generated by the upper and lower heating elements, thus accelerating cooking time and ensuring even baking.

Fan Heating
You can use this function for the ultimate roast or the perfect batch of pastries. The heating element surrounding the fan provides uniform heat distribution for even cooking results.

Fan Grilling
This function is perfect for cooking crispy fish, chicken fillets, or meat cutlets. The fan circulates the heat for all-over cooking.

Strong Grill
The perfect option for quick grilling. Toast your favorite meals or finish off your recipes with a crispy top.

Low Grill
Ideal for grilling a relatively smaller amount of food, such as snacks or toast. The low grilling function activates only the middle part of the upper heater, which means energy is used more effectively, thus minimizing waste.

MDC Multidimensional Cooking
Multidimensional cooking is the new generation of professional cooking technology that activates all heating elements on a multidimensional level. The upper, lower, and fan heating elements - combined with the fan - all work simultaneously to provide the most even heat and temperature distribution possible. The MDC function enables multi-tray cooking. Up to three different dishes can be cooked at the same time, without mixing flavors and aromas.

Slow Cooking
Cooking a delicious meal worthy of a chef requires patience. The SlowCook function slows down the cooking pace just enough to fully preserve the juice, aroma and flavor of the food, along with essential nutrients. For a crispier browned top, finish off your recipe with some low grilling.

Pizza Cooking
The bottom heating element, fan, and fan heating element operate simultaneously, providing the ideal conditions for baking pizza.

Save cooking time: Booster function for quick pre-heating
The booster function activates all heaters for quick pre-heating to reach the set cooking temperature. On Vitreous Line and Prime Line ovens, the booster function can reduce the time required to reach the desired oven temperature by up to 35%.

Bottom Heater
The concealed bottom heater is ideal for browning from the base.

Defrosting / Cooling
In defrost mode, no heating elements are used. Only the fan is activated to circulate air inside the oven. Frozen food is gently defrosted at room temperature, or cooked food is cooled.

Warm Keeping
This can be used to keep cooked dishes warm on the side, as well as to warm up plates or cups before serving. Temperature is automatically controlled. On Vitreous and Prime Line ovens, the temperature of this function can be adjusted in 5 °C intervals between 40 °C and 100 °C. It can also be used for yoghurt making or dough raising.

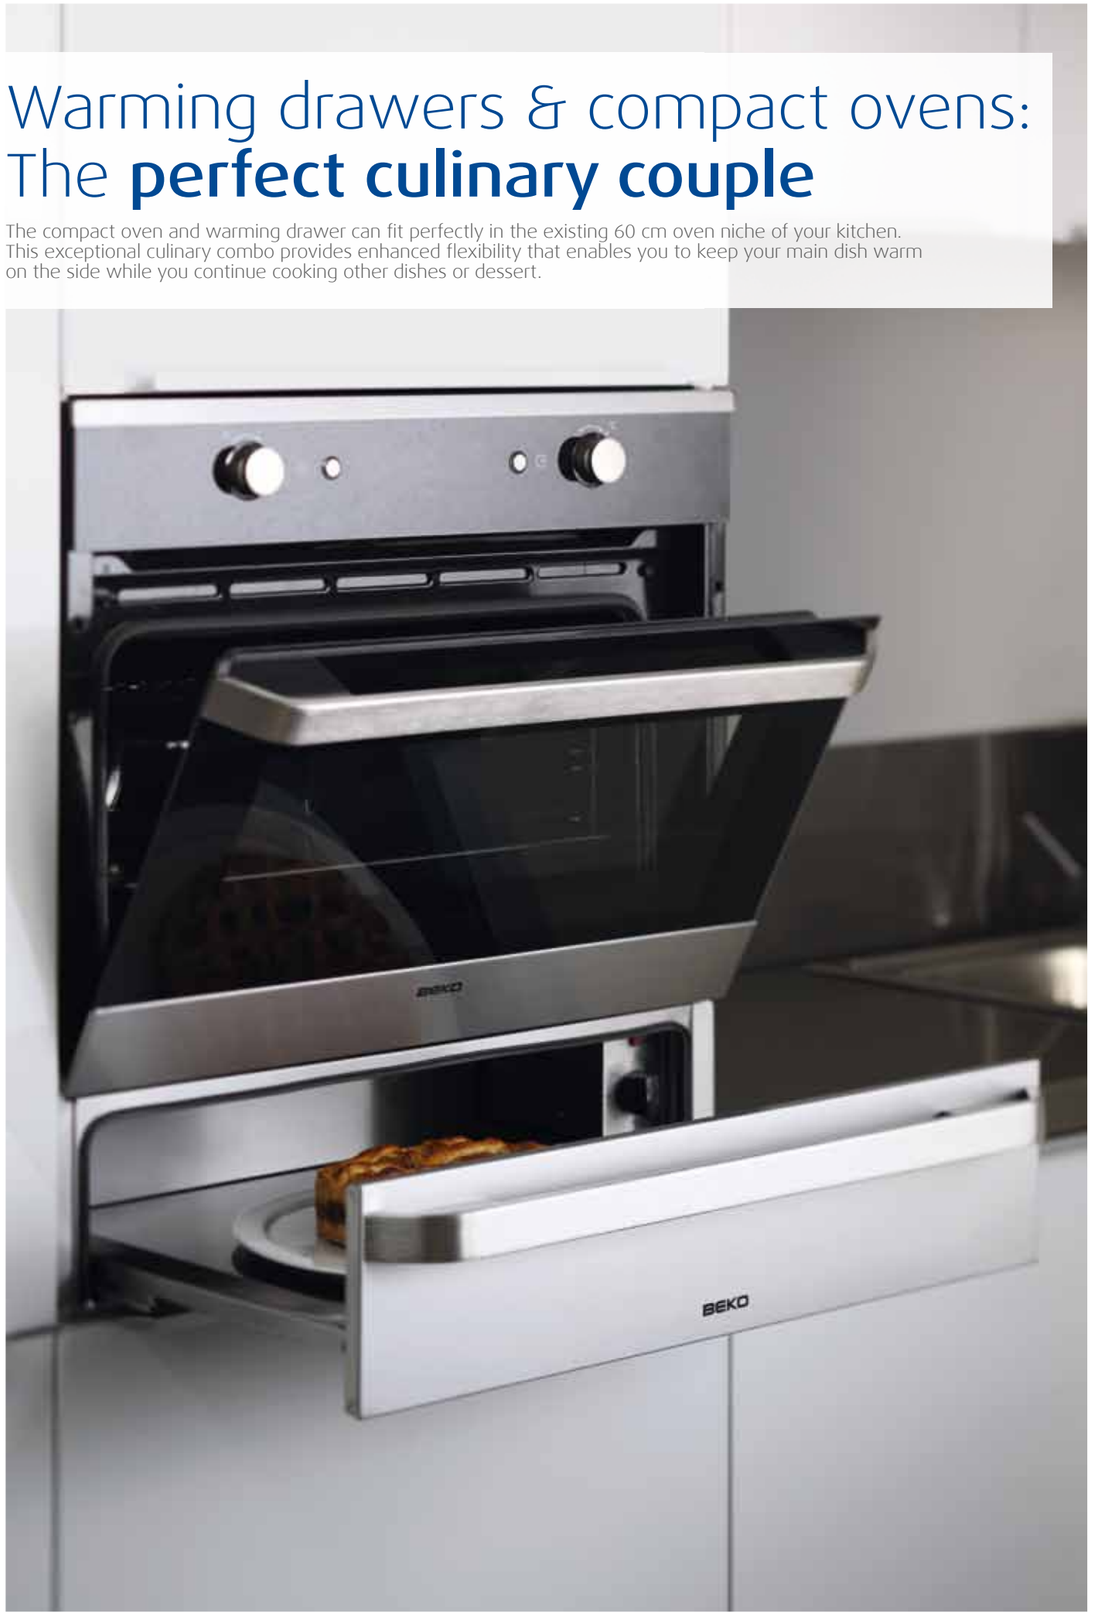
Warming drawers & compact ovens: The **perfect culinary couple**

The compact oven and warming drawer can fit perfectly in the existing 60 cm oven niche of your kitchen. This exceptional culinary combo provides enhanced flexibility that enables you to keep your main dish warm on the side while you continue cooking other dishes or dessert.



Don’t compromise quality

Timing is tricky when you’re preparing a big meal, trying to ensure that everybody’s food is prepared and ready at the right temperature at the right time. Taste is compromised if the dish is served too cold or too hot. That’s why warming drawers are the perfect solution for keeping food warm on the side while waiting for guests to arrive or while preparing other courses in the meantime. The temperature can be adjusted between 40 °C and 80 °C.

Prewarm your service plates

Serving a hot meal on a cold plate can spoil the consistency, texture and taste of a dish. Beko warming drawers can pre-warm up to six service plates at a time. The drawer is strong enough to carry a load of up to 25 kg. Due to the multi-levels of temperature adjustment, the drawer can also be used for defrosting, pre-heating of food, or dough raising.

Easy access

The drawer can be pulled out with the telescopic shelf system, thus providing a great deal of convenience when loading and unloading. Since both sides of the drawer are open, the dinner sets and the oven trays can be easily accessed, picked up, or placed.

When not in use during food preparation, the warming drawer provides an ideal storage space for extra cooking trays.

Microwave ovens: **Efficient** solutions for **practical cooking**

Strong, durable, stainless steel interiors

Ranging from 20 to 30 litre-capacity, Beko microwave ovens offer practical cooking solutions to help you keep up with a fast paced life. The range is well equipped with advanced functions, including Quick Start, Auto Weight Defrosting, Auto Cooking Menu, and Low and Strong Grilling.

Selected models feature combined cooking functions, including convection and microwave, grill and convection, and grill and microwave. Fan heating can also be used on its own for convection cooking.

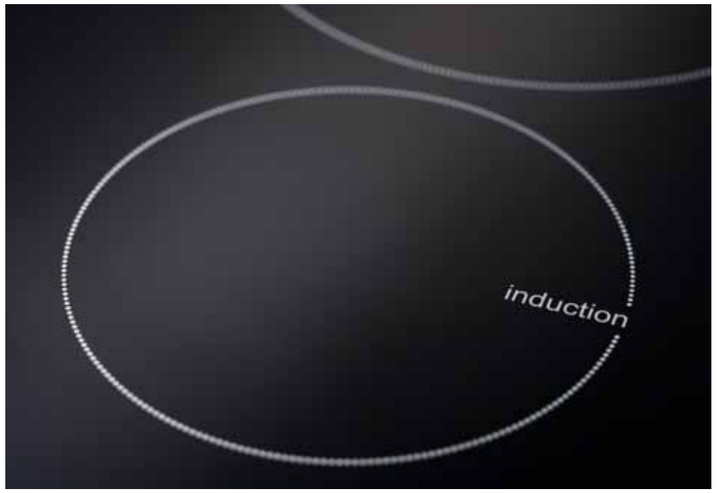
Hobs

Induction cooking technology

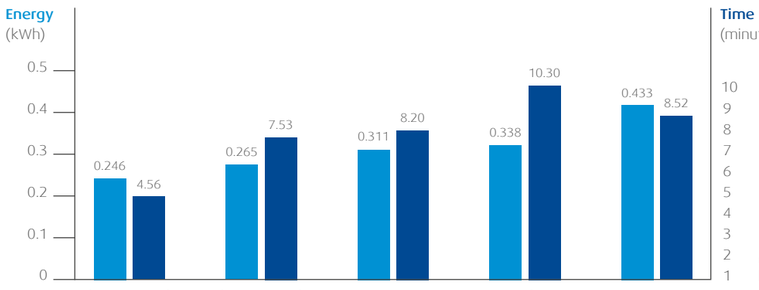
This is the latest and most efficient cooking technology available. Induction cookers heat up only when and where there's a pot on the vitroceramic surface - with the remainder of the surface barely warming at all.



Inside the induction hob, there is a coil that creates a magnetic field. When the pot is placed on the induction zone, this magnetic field transfers heat directly to the cooking pan. There's no flame or glowing hot surface. The only result is a rapid increase in food temperature that can be precisely regulated. This method of heating ensures minimum energy loss and maximum speed.

Efficient & quick cooking

The rapid heat induced by induction cookers is distributed evenly and consistently to your pot. Compared to standard cookers, Beko induction hobs with power boost can reduce cooking time by up to 56% and energy consumption by 43%.



Comparison of energy and time required to heat 2 litres of water from 20 °C to 90 °C.

Safety, efficiency, and cleanliness

Quick & easy cleaning

Since the vitroceramic surface doesn't heat up, spilt food won't burn on the hob, which makes it easy to clean up.

Safe cooking

Beko induction cookers are loaded with extra safety features that enable you to cook with ease. There are no open flames and it's only your pot that heats up while cooking. If there's no contact with a pot, or a pot is left on the cooker for an unusually long period, the heating stops automatically. The smart heat control feature will limit maximum heat to 300 °C. Should any liquid spill over on the control panel, the cooker will automatically turn itself off. The small object safety feature ensures that the hob will not be activated by any other extraneous object - such as a tea spoon that might have accidentally been dropped on the hob.

Vitroceramic hobs

The touch control vitroceramic hobs feature nine different cooking levels for each cooking zone, and the temperature can be set individually for each zone with the touch of a finger. The set cooking level for each zone is digitally displayed on the control area. The working space on the hob is maximized thanks to the central front positioning of the touch-sensitive control area.

The smooth yet scratch-resistant glass surface not only enhances the beauty of your kitchen, but is extremely easy to clean as well.

Beko ceramic hobs make cooking a pleasure, with various advanced features that include:

A timer and buzzer, which allows you to program a separate cooking duration for each cooking zone. Once the cooking time is over, the buzzer alarm is activated. You can deactivate the alarm by touching any key on the control panel.

A booster function that allows you to program each cooking zone to start cooking at maximum power, before returning to a set temperature once the food comes to a boil, and then continuing at this temperature until completion.

For absolute safety, the touch control vitroceramic hobs are equipped with a number of advanced safety features:

Residual heat indicators are easily visible. They indicate that the surface on an individual cooking zone is not yet cool enough to touch. The indicators turn off only when the surface temperature has dropped below 60 °C.

The electronic child lock can be activated to lock the functions of your hob so as to prevent little fingers from accidentally activating it.

The overflow liquid-sensitive control unit automatically shuts off the hob when food or water spills over on to the touch control area.

The automatic shut-off feature is activated when the cooking zones have been kept working for an unusually long period of time.

Beko ceramic hobs are equipped with versatile cooking zones that offer the flexibility of choosing between single, double, triple, or extended operation levels according to the size of your pot. This means that whether you use the smallest or the biggest pot, you're only using the amount of heat that you need. Furthermore, the warming zone on selected models keeps food warm, tasty, and ready to serve without danger of overcooking.

Main Features
- Front slim touch control
- 5 vitroceramic zones
- Front Left : 120/210 mm-600/2000 W
  Front Right : 140 mm-1200 W
  Rear Left : 160 mm-1500 W
  Rear Right : 100 W
  Central : 140/250 mm-1100/2000 W
- 9 cooking levels per zone
- Booster function for quick heating
- Timer and buzzer
- On-off indicator light

Safety Features
- Electronic child lock
- Residual heat indicator
- Overflow safety
- Automatic shut-off
- Overheat safety system

Technical Features
- Electric Power: 6.8 kW
- Product Dimensions (hxwxd):
  55 x 770 x 510 mm

Gas hobs

The high-power 3.600W wok burner cooks food rapidly, without compromising its nutritional value. Heat is more evenly distributed at the bottom of the pan, resulting in excellent cooking performance over a shorter period of time.

Cast iron pan supports enhance the stylish and professional look of your hob, while also providing maximum stability, thereby enabling you to use pots and pans of any size without the risk of tilting or sliding.

If the flame is accidentally extinguished by wind or by overflowing liquid, the flame failure device automatically cuts off the gas supply to prevent any gas leakage.

Integrated into the knobs, electronic ignition provides easy and simple lighting for gas burners.

Hoods

Cooker hoods

Beko cooker hoods offer an odour- and grease-free environment, ensuring that your kitchen remains clean and pleasant.

With a ventilation capacity as high as 755 m^3/hour, selected Beko cooker hoods are powerful enough to refresh the air every two minutes inside an average kitchen*.

* Calculated for a kitchen size of 10 sqm.

Carbon filters for re-circulated usage come in very handy in the absence of a chimney connection.

Halogen illumination lights provide clear visibility when you cook.

Aluminum cassette filters absorb any trace of grease and odour in the air. The filters are washable and very easy to clean.

Leave nothing behind a delicious home-cooked meal

An easy-to-use touch-sensitive control unit visually displays the set power level.

An auto air refreshment function activates the motor automatically for 10 minutes every hour at minimum speed, thus providing a continuous flow of fresh air in the kitchen. The cooker hood works very efficiently on low energy consumption and low noise, and is also effective in eliminating cigarette odours.

When activated, the time-controlled intensive extraction mode increases the extraction power of the motor to a maximum level. After 10 minutes, the extraction level setting of the hood reverts back automatically to the third level. This function is ideal for removing intense odours and vapours, especially during frying or grilling.

Auto SHUT-OFF

With the simple press of a button, you can programme your hood to switch off automatically after 15 minutes. This function ensures that you don't have to stay in the kitchen - or even at home - while the cooker hood eliminates all traces of odour after an intense cooking session.

The saturated filter indicator gives out a visual warning by blinking when it is time to clean the cassette filters or replace the charcoal filters.

Dishwashers

BEKO_BI_FINAL_03.indd 92-93 11/10/09 4:20 PM

Perfect performance

Beko dishwashers with **A energy**, **A cleaning** and **A drying performance** achieve the utmost in cleaning and drying results while **consuming minimum energy**.

Tablet detergents are compact and easy to use, but they may have some drawbacks on occasion, like unsatisfactory drying results or undissolved tablet residue left in the machine. Beko dishwashers are equipped with a tablet detergent button to eliminate such drawbacks and ensure maximum performance when tablet detergents are used.

With the extra drying function, you can obtain perfect drying without rings, drops or streaks on your dishes, even if you use short programs.

The active fan drying system uses a fan to increase air circulation in the dishwasher to achieve perfect drying results and to provide normal temperatures for your dishes when the program is finished. This means you can immediately put your dry dishes away in the cupboard without burning your hands.

Beko dishwashers maintain a calm environment in your kitchen. Their quiet operation will greatly benefit your quality of life at home, leaving you and your family undisturbed even at night.

Quiet, reliable, stylish efficiency

Time management

The wash cycle can be delayed for three, six, or nine hours (up to 24 hours on digital models) enabling you to plan your wash time more flexibly while taking advantage of reduced electricity rates.

A Class 58 min

Quick & Clean, a unique program from Beko, guarantees exceptional A class washing performance, not only for lightly soiled items, but for normally soiled pots and dishes as well. This A class wash cycle cleans your dishes in just 58 minutes, which is even quicker than washing by hand.

Quick & Clean vs. washing by hand*

	Washing by hand	Quick & Clean Program
Washing Time	79 minutes	58 minutes

* According to a study by University of Bonn, Germany, 07/02-03/03

The Xpress20', another unique program from Beko, washes a half load in only 20 minutes.

Perfect for lightly soiled dishes and glasses, the Mini 30' program washes a full load in 30 minutes at 35 °C, thus saving time and energy.

BEKO_BI_FINAL_03.indd 94-95 11/10/09 4:20 PM

XL Capacity: Washes **25% more**

XL capacity dishwashers wash up to **15 place settings** instead of the standard 12.

Such increased washing capacity offers substantial benefits. Reducing the number of wash cycles means:
- Saving 25% on detergent*,
- Prolonged product lifetime – up to 2 years **
- Saving 15% on water and energy consumption***

* If standard tablet detergents are used
** Lifetime simulation tests of dishwashers are based on 280 cycles / year.
*** When consumptions per setting are compared between standard and XL Capacity models.

Extra-high interior with 86 cm height

Specially designed for the new generation of worktops with a height of 86 to 92cm, dishwashers with an extra-high interior provide greater inner dimensions, thus offering the capacity for loading trendy XL sized plates in the lower basket.

Stainless steel clad control panels for an aesthetic high-quality finish

Easy assembly

With the easy door-balancing system, door balance can be adjusted for different weights of built-in doors directly from the front, without the need for taking apart the sidewalls of the dishwasher.

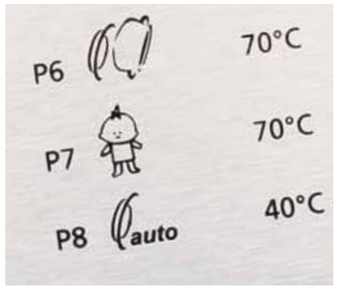
The height of the rear feet can be adjusted from the front without taking the dishwasher out of its niche.

Thanks to the intelligent front feet design, the appliances can be adjusted to fit a niche with +/-100 mm range, from 820 mm up to 920 mm.

Fingerprint-free stainless steel

Thanks to a special coating on the stainless steel surfaces of selected models, fingerprints are avoided. The appliance always looks spotless, clean and shiny.

BEKO_BI_FINAL_03.indd 96-97 11/10/09 4:21 PM



Baby Care Line: Extra **hygiene** & **care** for your baby.

Ensure that your children's eating utensils are sparkling clean and germ free. Beko Baby Care Line dishwashers combine an intensive wash cycle with an extra hot rinse cycle in order to provide total hygiene for your baby's utensils, plates and bottles. This baby care program provides 99.99 % hygiene, as certified by the LGA.

The baby-bottle holder accessory integrated into the lower basket is a design solution that guarantees the convenient, efficient and safe cleaning of your baby's bottles.

The special baby cutlery tray is another design solution from Beko. This functional and compact tray is placed right below the upper basket and slides in and out easily, providing extra hygienic space for your baby cutlery. Those households without a baby can alternatively use this tray to place extra utensils.

Due to dirt accumulation over time, bacteria reproduction may occur on the gasket of the dishwashers. The antibacterial seal on Beko dishwashers acts as a guardian to block this formation.

The child lock option can be activated to prevent children from tampering with the buttons. Activating the child lock option prevents any change from being made to the selected program.

Safety

In case of overflow, the Water Safe system of Beko dishwashers cuts off the water flowing into the machine. Selected models are equipped with the Aquasafe+ system that cuts off water supply from the tap in case of overflow or leakage, thus providing added safety. This ensures increased protection against water damage.

Intelligent Sensors: Auto Program

With auto program, sensors automatically detect the soil level of dishes to determine the appropriate wash cycle for the job at hand. Dishes are washed using the minimum required amount of energy and water, ensuring the program remains both practical and economical.

Functional accessories

Thanks to the acrobat system, the height of the upper basket can be easily adjusted even when the basket is full, providing extra space for larger dishes and pans.

Height-adjustable shelves for mugs offer maximum utilisation of the available space. Tall mugs and small cups can be placed one atop the other, or alternatively, the upper part can be used for long utensils.

Plate supports can be folded away easily to allow space to accommodate large pans and pots.

The upper and lower rack handles make it ergonomically easier to pull the racks out, even when they are loaded.

The three-way split cutlery basket can be divided into three separate parts. The parts can be individually placed in either the lower or upper basket to provide full flexibility in loading.

Refrigerators

BEKO_BI_FINAL_03.indd 116-117 11/10/09 4:26 PM

Energy Saving

Selected models feature **A+ energy efficiency** class. An A+ energy efficiency class refrigerator **consumes** up to **24% less** than an identical A class refrigerator.

Functional inside, beautiful outside

Functional interior

Beko built-in refrigerators are equipped with a number of functional accessories:

- Chrome-coated wine rack
- Safety glass shelves
- See-through freezer compartments with colourless transparent front
- Zero-degree chiller compartment

Spill-proof glass shelves

Made of tempered safety glass, adjustable glass shelves are:

- Versatile enough to permit the maximum usage of the available space
- Strong and durable
- Spill-proof and extremely easy to clean

Silver protection for extra hygiene

The antibacterial silver ion coating on the inner liner of the fridge prevents the accumulation of harmful microorganisms, bacteria, and unwanted smells.

Frost-free system

The frost-free system eliminates the formation of ice on food and in the interior of the appliance, which means that no defrosting is required. You can enjoy the hassle-free lifelong use of your product without all those tedious de-icing procedures.

Drawer type construction

The Beko built-in cooling range includes a drawer-type larder fridge (BUDL 700) and a drawer type frost-free freezer (BUDZ 700). Drawer type built-under models feature two drawers with telescopic rails that can be completely taken out, whether to organize the food inside or for cleaning purposes. The interiors are functionally designed for better organisation of food, and the units can be placed under the counter close to the hob or sink for easier access to fresh or frozen food during meal preparation.

PLUS X AWARD® achieved for Ergonomics
